ABSTRACT

Designed for teachers of one-semester courses in health education at the high school level, this course guide helps students develop self-awareness of lifestyle choices through the use of self-assessments. Emphasis is placed on assuming responsibility for health status, maintaining and improving stress reduction techniques, and understanding how health and/or susceptibility to disease may be a function of physiological resources and lifestyles. Four units of study on various aspects of stress are presented. Each unit begins with an overview of instructional strategies and major concepts, followed by a Daily Activities Chart listing student schedules and resources. Appendices contain introductory lectures, student exams and lecture sheets, student handouts, and references. (CB)

HL 51

“Health: Putting Yourself in Charge” -

Practices for A Healthier You

Course Guide

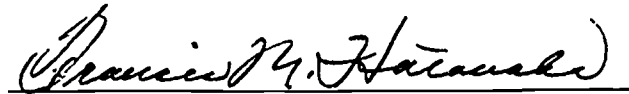

FOREWORD

This guide is designed for teachers who will be teaching a one-semester course in health education at the high school level. HL51 Health: Putting Yourself in Charge (Practices for a Healthier You) is included in the Foundation Program's Authorized Course and Code Numbers (ACCN) as a minimum elective for grades ten, eleven or twelve. The major purpose of this course is to develop awareness of lifestyle choices through the use of self assessments and to motivate students to assume responsibility for their health status. Instructional emphasis is on preparing students to maintain and improve their stress reduction techniques; to understand how their health and/or susceptibility to disease may be a function of their physiological resources and lifestyles.

This guide is organized into four units of study. Units begin with an overview of instructional strategies and major concepts, followed by a Daily Activities Chart listing the students schedule and resources needed.

Training is available to implement this course through the Office of Instructional Services. Effective implementation of this course will contribute to students assuming responsibility for the protection and improvement of their health and the health of their family and community.

Francis M. Hatanaka
Superintendent

ACKNOWLEDGMENTS

This guide was developed and written by Donald Kirby, an Educational Specialist with the Hawaii District Office. The Hawaii District provided a semester of professional improvement leave to Mr. Kirby for the purpose of developing this guide.

Significant contribution was made to the development of this guide by teachers, educational specialists and other professional personnel in the health and educational professions who reviewed earlier versions of the guide and made suggestions for revision. The following have been instrumental in providing advice and/or coordinating the contributions of many others.

Nelson Yoshioka	Honolulu District Educational Specialist
Gordon Ozawa	Central Oahu District Educational Specialist
Violet Todoki	Leeward Oahu District Educational Specialist (Retired)
Kerry Koide	Leeward Oahu District Educational Specialist
Annette Murayama	Windward Oahu District Educational Specialist
Abraham Kaahui	Maui District Educational Specialist
Albert Nagata	Kauai District Educational Specialist
Deanna Helber	Educational Specialist II - Nutrition Education
Nancy Yuen	Educational Specialist II - Guidance/Counseling
Leslie Kobayashi	Educational Specialist II - Alienated
Patience Cummings	Teacher, Kauai High School
Jane Schroeder	Teacher, McKinley High School
Suzanne Mishima	Teacher, Waipahu High School
Marion Akamine	Department of Health, Health Promotion and Education Office
Sara Izen	Department of Health, Central Oahu Mental Health Center
Sachie Taketa	Department of Health, School Health Services Section

Special thanks to Dave Thorne of Technical Assistance Center for the cover and unit graphics, and Allen Emura of Reprographics Section for the guide design.

The final preparation of this document is a result of the combined efforts of Dr. Mildred S. Higashi, Educational Specialist III, Sciences and Mathematics Section, Office of Instructional Services; Gayle Miyashiro, secretary, Nutrition Education and Training Program; and Lynda Asato, Educational Specialist II, Health Education.

INTRODUCTION

The youth of today face a world filled with division and stress. Competing values, technological changes, environmental pollution and the developmental stresses of adolescence tax the young person's ability to cope. And in the final analysis, it is the adequacy of one's coping strategy that determines personal effectiveness and endurance. One could even go further and make a prediction that individual coping skills will play a large part in determining both the length and quality of life that each student will experience. Maladaptive coping strategies are likely to shorten one's life span and diminish the quality of life; possibly, leading to disease and/or death.

This course guide HL51 Health: Putting Yourself in Charge (Practices for a Healthier You), is designed for a one-semester high school minimum elective course. It is multidisciplinary in nature and includes concepts and skills from a variety of disciplines, including psychology, sociology, physiology, nutrition, and applied areas of health education, physical education and career education.

In their discussion on "Chronic Stress in Children and Adolescents", Carl E. Thoreson and Jean Eagleston inform us that "children and adolescents, as a first step, need to understand how their health and welfare, and indeed, their susceptibility to a broad range of diseases is in large part, a function of the resources they have to draw upon."

They feel it unfortunate that one of the "major shortcomings of Health Education programs has been their excessive reliance on providing information to students based on the assumption that this information will then be acquired and successfully used by the student in promoting their physical and mental health." They go on to state that "in the area of chronic stress, informing students, for example, about the values of learning how to relax, of having close friends, and of changing ones self-talk will generally be ineffective unless students already know how to do so and we suspect that many do not. Thus, in the area of resources, educating students of all ages requires more than informing them about chronic stress and its consequences. Unfortunately, to our knowledge there is currently little being done in elementary and secondary education to even inform students about chronic stress and its intimate connection to disease as well as to health and well being." HL51 Health: Putting Yourself in Charge (Practices for a Healthier You), is designed to change this situation by informing students about the results of chronic stress, and by helping them to master and through practice to apply a variety of stress reduction techniques in their daily lives.

Interdisciplinary science has established beyond doubt that it is the function of the mind/body as an integrated unit that maintains health and well being. Fragmentation and disruption of these harmonious psychophysical patterns degrade the quality of life and will eventually cause illness. Young people today may be accumulating the effects of stress without overtly developing outward physical symptoms for years. However, by the end of the basic twelve-year educational period, many are approaching adult levels of stress disorders. Because the effects of stress and disruptive influences are subtle and cumulative, awareness must begin early in the educational process.

The current and future needs of students demand a more active, experiential curriculum than has traditionally been presented. The need for new approaches, like lifestyle analysis and lifestyle planning, arises from a number of social changes and situations students are now experiencing. Among the changes are the rise of the holistic movement, the increased cost of medical care, and research that links life - stress - disease and death.

PURPOSE AND OBJECTIVES OF THE COURSE

The purpose of the course is to develop awareness of lifestyle choices and to motivate students to assume responsibility for their health.

The objectives of this course are to help students achieve the following:

- Develop awareness of major health problems that stress can generate and of the need to avoid or manage excessive stress levels.
- Identify and explore available resources/techniques to deal with stress.
- Demonstrate increasing responsibility for protection and improvement of their health through development of life plans.

OVERVIEW OF COURSE

The content of this course includes basic concepts, information and skills in the following areas:

1. Relationship between stress and disease.
2. Lifestyle analysis (through health self-assessments).
3. Resources for stress reduction:
 - Physiological (including diet/nutrition, exercise, breathing, relaxation, biofeedback).
 - Cognitive (including affirmation, refuting irrational ideas, thought stopping and assertive training).
 - Environmental (including adaptation, social engineering, time management, coping skills, goal alternative training, etc.).
4. Life Planning skills.
 - Orientation (i.e., planning, anticipating and evaluating events, etc.).
 - Interpersonal/Relational (i.e., friendship, commitment, etc.).
 - Social and cultural (i.e., socio-economic, family background, etc.).

NOTES TO THE TEACHER

This guide examines basic concepts, information and resources for stress reduction in four units of study. Instructional emphasis will be the preparation of students to maintain and improve their stress reduction techniques; to understand how their health and/or susceptibility to disease is a function of their physiological resources and lifestyle.

Each unit begins with an overview of the major concepts and teaching strategies and resources, followed by a suggested unit outline. Finally, for the teacher, procedures and resources are listed on charts for easy reference. The Appendix contains lectures, exams, study guide worksheets and references.

Although specific materials are recommended for use with the course guide, refer to Approved Instructional Materials (AIM) lists for updates of course resources.

Organizational patterns include large and small group sessions and independent study assignments. Strategies include values clarification, decision making and inquiry processes together with information acquisition and concept and skill development. Activities are designed for students of diverse abilities.

Finally, a word about grading students in this course is appropriate. Test scores, student participation in class discussions, quality of performance on homework and special assignments and reduced stress levels as measured by the stress scales should provide ample criteria for grading. Unit tests are provided in this guide but these tests should not constitute the largest share of the students' grade.

UNIT I

What Is This Thing Called Stress or Nobody Told Me There Would Be Days Like These

UNIT I: WHAT IS THIS THING CALLED STRESS?

. or

NOBODY TOLD ME THERE WOULD BE DAYS LIKE THESE

Overview of Instructional Strategies and Major Concepts

This unit of twenty (20) instructional hours introduces the student to the concepts of lifestyle planning, stress and disease, and the role individuality plays in relation to both of these areas. Information, facts and life experiences create awareness within the individual. This unit proposes to present factual information, concepts, and life experiences that will lead the student to self-understanding and to the practice of a healthier lifestyle. Specific concepts included, but not limited to the following are: stress, eustress, distress, holism, disease, wellness, mind-body relationships, fight or flight syndrome and General Adaptation Syndrome.

The major purpose of this unit is to motivate the student to assume responsibility for his or her own health status.

The basic introductory concepts are covered by utilizing teacher lectures, student readings, filmstrips, tapes and class discussions. The audio-visual resources chosen to introduce this course have been selected because they feature adolescents dealing with stress in modern day settings. Specific concepts and the vocabulary of stress are illustrated in a meaningful fashion and teenagers can easily identify with the terms and concepts when they see them portrayed in the life of a peer.

The author of the student textbook, Controlling Stress and Tension, has included a number of meaningful self-assessments. If the student is to do any kind of lifestyle planning these experiences at self-assessment are vital.

The work of pioneers in the field of stress research, such as Dr. Cannon and Dr. Selye, needs to be emphasized. Recent research findings on lifestyle-stress and disease will also be studied in this course.

Several stress management strategies will be studied and practiced in-depth in subsequent units. It is important to view these first suggested strategies in unit one as just a part of a more complete picture which will develop through the whole course.

Remember, there are basically three ways to break the stress syndrome. These include: cognitive, physical (physiological) and environmental strategies or resources.

DAILY ACTIVITIES CHART

DAY	TEACHER LECTURE AND CLASS DISCUSSION	TAPES/FILMSTRIPS	STUDENT READINGS	SURVEYS/VISUALS OR OTHER ACTIVITIES	SELF ASSESSMENTS
1	Introductory Lecture #1 All the Wrong Answers		Controlling Stress and Tension, Chapters 1-5	Student Bulletin Board Assignment	
2	Class Discussion	Paul's Problems 11:55 minutes	Introduction, Chapter 1	Sources of Stress... (worksheet survey)	
3	Class Discussion	Karen's Problems 11:43 minutes	Chapter 2		
4	Class Discussion	Daniel's Problems 13:21 minutes	Chapter 3	Student assignments <u>Stress without Distress</u>	
5	Class Discussion	Managing Stress 12:36 minutes	Chapter 4	Student assignments <u>Analysis of Sources of Stress</u>	
6	Class Discussion <u>Managing Stress Anxiety</u>	What is Stress? 14:00 minutes	Chapter 5		
7	<u>and Frustrations</u>	Stress and the Body 13:00 minutes			
8		<u>Stress without Distress</u> <u>Evaluation of...Concepts</u>			
9		or Chronic Stress: A <u>Major Health Hazard</u>			
10	Class Discussion Conceptual Review			Concept Review - Exam from Reading	
11	Lecture #2 Wellness Concept				Student Personnel Health Assessment and
12	Class Discussion				Health Satisfaction Scale
13	Class Discussion (Wellness Index)				Wellness Index
14	Class Discussion (Wellness Index Analysis)				Wellness Index Analysis
15	Class Discussion Conceptual Review				Optional: Health Risk Index or
16	Special Student Reports/Discussion				Test Well, A Self-Scoring Wellness Assignment
17	Special Student Reports/Discussion				
18	Special Student Reports/Discussion				
19	Review/Summary Unit One				
20				Unit Exam for Unit One	

PROCEDURES

DAY 1

Begin the first day with a teacher lecture on the following concepts:

- cost of stress-related diseases
- level of maladaptive coping
- suicide
- six basic concepts of the course

Assign homework activities:

1. Have students read (or listen to the tape) and report (written and to the class orally) on Selye's concept of "the philosophy of gratitude." Ask what this philosophy is based upon and how can it help one to cope with the stress of life.
2. Have students search through newspapers and magazines for photos depicting stress and stress reactions. Let students design a bulletin board in class so all students may be aware of the "look" of positive (eustress) and negative (distress) stress. This will provide experience in identifying the physical symptoms of stress, the location of stressors, and the sources of stress.
3. Have students conduct a survey of classmates that identifies the sources of stressors in their lives. To facilitate this process have them use the student survey forms provided and prepare charts and other visual aids to show a class profile.
4. Have all students begin reading the Preface, Part I and Chapters 1 to 5 in their textbook. These readings should be completed by class session six. One chapter a day is the recommended pace.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

- + Lecture #1 "All the Wrong Answers" (see Appendix A)

- * Stress Without Distress, Dr. Hans Selye, from Library or The Brain, Stress Management Series (see reference in the Appendix D)

- ** Newspapers, magazines, bulletin board supplies.

- ** Activity #2 - Sources of Stress in My Life (worksheet - see Appendix C) Analysis of sources of student stress (worksheet - see Appendix C)

- *** Controlling Stress and Tension, pp. 1 to 51.

25

PROCEDURES

DAYS 2 to 5

On the following days, show one of the filmstrips from the series Teenage Stress (#61400 Barr Films, c. 1981) followed by discussion or suggested activities from the Teacher's guide for the filmstrip series.

- Day 2 - "Paul's Problems" (96 frames, 11:55 minutes)
Use Teacher's guide, pp. 6-7 for discussion.
- Day 3 - "Karen's Problems" (100 frames, 11:43 minutes)
Use Teacher's guide, pp. 9-10.
- Day 4 - "Daniel's Problems" (120 frames, 13:21 minutes)
Use Teacher's guide, pp. 12-14.
- Day 5 - "Managing Stress" (103 frames, 12:36 minutes)
Use Teacher's guide pp. 14-16.

These resources will help teenagers to recognize and begin to deal with stress in their own lives. The student will learn about five stress management strategies which should be discussed with reference to stress reduction resource categories (cognitive, physical, environmental).

DAYS 6 to 10

During week two, another filmstrip series is recommended for background information. Use Part One: "What is Stress?" (77 frames, 14:00 minutes) to help further illustrate the important function of 'individuality' in the stress formula (stressors + individual make-up = stress). Begin by putting this formula on the chalkboard before showing the filmstrip. A good set of review questions can be found on pages 12 to 14 in the teacher's guide.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

*** Teenage Stress filmstrips; sound filmstrip projector

+ Teacher's guide from Teenage Stress by Dorothy McKissack

*** Managing Stress, Anxiety, and Frustration, by Human Relations Media; sound filmstrip projector.

+ Teacher's guide for Managing Stress, Anxiety and Frustration

PROCEDURES

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

Part Two: "Stress and the Body" (73 frames, 13:00 minutes) of this filmstrip series may be used to make the connection between stress and disease. The importance and meaning of the concepts of 'fight or flight', homeostasis, and General Adaptation Syndrome (G.A.S.) are well covered in this filmstrip. Once again, use of the review questions in the teacher's guide (pp. 14-16) is recommended.

As a final activity for week two, it is suggested that two tapes from The Brain Stress and Stress Management Series be utilized. Recommended resources are Chronic Stress: A Major Health Hazard by Carl Thoresen and Stress Without Distress: Evolution of the Functional Concept by Dr. Hans Selye.

- *** The Brain, Stress and Stress Management Series, by ISHK Book Service; cassette tape recorder.

DAY 10

Use the tenth class session for the conceptual review and discussion of readings, etc.

DAY 11 to 15

During week three, start with the Wellness lecture, then utilize Student Personal Health Assessment and Health Satisfaction Scale from Investigation in Stress Control. Determine if this is a class that is highly satisfied with their current health status or high dissatisfied. If the class as a whole is satisfied with their results on the Personal Health Assessment, introduce the Wellness Index and discuss the concept of Wellness versus Treatment Model. Utilize the Wellness Workbook to prepare the class for this self assessment. Have students prepare a two page analysis of the results of their index to be used later in the course in their Lifestyle Improvement Plan.

- + Lecture #2 "Wellness Concept" (see Appendix A)
- *** Investigation in Stress Control by Roger Allen, pages 3 to 8.
- *** Wellness Index

An optional activity from the Wellness Workbook (pages 225-228) is the use of the Health Risk Index available from Medical Datamation at a cost of \$5.00 per student. This computerized questionnaire is an outgrowth of a Health Hazard Appraisal developed by Lewis Robbins, M.D. and

- *** Medical Datamation
Southwest and Harrison
Bellevue, Ohio 44811

PROCEDURES

Jack Hall, M.D. of the Methodist Hospital in Indianapolis, Indiana.

A second optional activity is the use of the Test Well, a self-scoring Wellness Assessment Questionnaire, available from the Institute for Lifestyle Improvement.

DAY 16 to 20

During week four, culminate the unit with student reports from special assignments and class discussion on related readings/experiences.

Review the unit and close with the unit exam.

RESOURCES

University of Wisconsin
Stevens Point, Wisconsin 54481

*** Student exam No. One - Unit One
"What Is This Thing Called Stress"
(See Appendix B for exam and
answer sheet.)

UNIT II

The Generalized Resources To Stress or How To Play Your Own Tune

UNIT II: THE GENERALIZED RESOURCES TO STRESS

OR

HOW TO PLAY YOUR OWN TUNE

Overview of Instructional Strategies and Major Concepts

This unit of twenty (20) instructional hours will explore the students' individual stress profiles. Some causes of psychosocial, bioecological and personality based-stress will be discussed in the student textbook. Major concepts of homeostasis and adaptation will be studied. A self-assessment precedes each of the ten major causes of stress discussed in the textbook.

If students are to be motivated to take responsibility for their own health they need to become aware of why and how stress is affecting their health. Have students continue readings from the textbook which further explains the individual's stress predispositions. Students should have a clearer understanding of where and when they need to utilize resources to improve their risk status and vulnerability to stress. Specific stress management techniques will be introduced in Unit III.

Students should begin to understand the need for change and growth by continuing the self-assessment process. The unit concludes with a Personal Stress Profile. By combining insights gained from the use of the Wellness Index (Unit I) with the Stress Profile Summary Sheet (see Appendix C) each student will begin to see his or her own areas of greatest need.

Finally, life planning skills need to be given a broad treatment here. There are three areas for discussion:

1. Orientation resources are skills such as anticipating and evaluating events, planning and preparing, tolerating frustration, flexibility, farsightedness and rationality.
2. Interpersonal-Relational resources are friendships, commitment to others, social skills and assertiveness.
3. Social and Cultural Resources are importance of socio-economic levels, family backgrounds, religions, arts and mass media, etc.

The Unit Exam is done on the last day or second to the last day of the unit and reviewed the following week.

38			Controlling Stress and Tension p.120-121		STRESS PROFILE
39	Review/Summary of Unit Two				STRESS AUDIT
40	CLASS ANALYSIS			Unit Exam for Unit # Two	

PROCEDURES

DAY 1

Begin this unit by having students read from the text, Introduction to Part II and pages 57-61 after they complete the self-assessment on pages 55-57. Supplemental reading recommended includes "How Change Can Make Us Ill", pages 66-75 from the Blue Cross Book of Readings. Discuss in class the concepts of "Homeostasis" and "Adaptation". Have all students draw a picture with symbols that illustrates their understanding of the concept of "Homeostasis" and/or "Adaptation."

Continue with the reading on Frustration, pages 63-67 in the text after the self-assessment on page 62 has been completed. Supplemental reading recommended is the article on pages 28-33, "Mastering Adolescents" from the Blue Cross Book of Readings. Discuss the concepts of overcrowding, discrimination, socioeconomics and bureaucracies in class.

Continue with the self-assessment on page 68. Follow-up with readings from the text on pages 68-72 Overload. Supplemental readings of "Stress for Success: How to Optimize Your Performance" are recommended. Class Discussion of these concepts should follow the readings. Also, consider the article "Breakdown!? What To Do" from the Blue Cross Book.

Proceed with the self-assessment on pages 72-73 and the readings that follow on Deprivation in the text, pages 73-75. "Growing Up Mentally Fit" by Dr. Lee Salk would make an excellent supplemental reading (Blue Cross Book of Readings).

The next self-assessment will be found on pages 88-89 of the text. The reading on pages 89-98 on Nutrition should follow. Supplemental reading can include "Realities of Nutrition" by Ronald M. Deutsch.

Have selected students design a bulletin board display of the Nutrition Realities and Myths. Illustrations of nutritional deficiency, fat and diets, food processing, carbohydrates (simple sugars), proteins and balance are important to the display.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

*** Drawing paper, pens or crayons

*** Controlling Stress and Tension
pp. 55-61, 63-67

- * Have some of your best students prepare a report on "Breakdown". Perhaps they could talk to doctors, pastors, family members to discover what happens to a family and/or person as a result of breakdown. How long does it take to recover? What changes in lifestyle have to be made? Was stress a factor in the breakdown?

*** Controlling Stress and Tension
pp. 68-72, 72-75, 88-98

** Bulletin board materials

PROCEDURES

Proceed to self-assessment exercise 6 on page 98-99. Complete the textbook reading on Noise on pages 100-103. The supplemental reading recommended is the "Quiet, Please" article by Peter Steinhart.

Conclude your study on the causes of stress by completing the self-assessments #7-9. These include Self-Perception, Patterns of Behavior, The Anxious Reactive Personality, and the readings from Chapter 8 of the text, pages 104-107.

Have your students chart their stress profile on the Personal Stress Profile Summary Sheet on pages 120-121.

Discuss results with the class incorporating insights gained from the Wellness Index. What must the student do to prevent and/or reduce his or her areas of distress? What intervention and management skills need to be learned? Where are the students greatest stressors in the areas of Psychosocial, Bioecological, or Personality? Analysis and student involvement need to be stimulated at this point. Unit III which follows will introduce students to techniques that can help reduce stress and improve lifestyles.

Administration of the stress audit is recommended for two reasons. First, the STRESS AUDIT will tap into six areas of lifestyle that frequently manifest as stressful areas. Second, it will show the students where in terms of bodily systems they tend to be affected by stress. It will also give a measure of students' vulnerability not given specifically in the text book Stress Profile.

39 Optional Assignments

1. Have selected students prepare reports on the relationship between work and stress, socio-economic levels and stress, and family backgrounds and stress.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

*** Controlling Stress and Tension
pp. 98-103, 104-117

PROCEDURES

2. Have a few of your students report to you or the class on the role of friendship in coping with the stress of life. How can we help ourselves and others by maintaining friendships?
3. Request special reports on the role of religion in coping with the stress of life.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

UNIT III

Stress Reduction Techniques or I'm Dancing As Fast As I Can

UNIT III: STRESS REDUCTION TECHNIQUES

OR

I'M DANCING AS FAST AS I CAN

Overview of Instructional Strategies and Major Concepts

This unit of forty (40) Instructional hours will introduce students to a wide variety of specific stress reduction techniques. The students should, at this point in time, have a fairly clear understanding of the factors that lead to stress. They are now in an informed position to begin to learn to manage or control stress.

The purpose of this unit is to give the student as wide an exposure as possible to the practice of stress management techniques available in the instructional time allowed.

Interrupting the stress syndrome can be accomplished in three ways: first, by dealing with the environmental; second by working with the mind; and third, by dealing with the response of the body.

The student text (Controlling Stress and Tension) will treat environmental stress management by introducing the student to the concepts of Adaptation, Frustration, Overload, Deprivation and Noise.

Techniques to deal with these sources of stress will include SOCIAL ENGINEERING, TIME MANAGEMENT COPING SKILLS, GOAL ALTERNATIVE TRAINING and others.

The text Controlling Stress and Tension will treat mental stress management by an examination of the concepts of poor self-esteem, depression, Type A Behavior and Anxious Reactivity. Techniques to deal with these sources of stress can include Affirmation, Refuting Irrational Ideas, Thought Stopping and Assertiveness Training.

Finally, under the techniques for physical stress reduction the text examines the techniques of Breathing, Relaxation, Biofeedback and Exercise. Diet and Nutrition will be included in the conceptual review with the class at this time also.

Not all of these techniques are covered in the student textbook. Therefore, use the teacher resources to assure the widest exposure to techniques possible.

Following such an exposure to techniques, the students will be ready to write a "SELF-PRESCRIPTION FOR STRESS MANAGEMENT", based on their WELLNESS INDEX, STRESS PROFILE, STRESS AUDIT and familiarity with the techniques that they have practiced.

PROCEDURES

DAY ONE

Begin this unit with a teacher lecture reviewing conceptual materials covered thus far and relating these concepts and self assessment techniques to lifestyle planning. Explain that the purpose of this course is to teach practices that will enable students to take responsibility for their own health. Based on their understanding of this, proceed to introduce them to techniques to control or reduce stress generated by social, environmental and mind-body sources.

Follow-up your lecture by assigning your students the reading of Part III "How To Prevent and Reduce Stress: Intervention and Management Techniques" from the text.

Begin your classroom activities by a discussion of SOCIAL ENGINEERING (pages 125-138 from Controlling Stress and Tension).

You will find some excellent supplemental resources by referring to the following chapters in The Relaxation and Stress Reduction Workbook by Davis, McKay and Eshelman:

- Chapter 11 COPING SKILLS TRAINING
- Chapter 12 ASSERTIVENESS TRAINING
- Chapter 13 TIME MANAGEMENT

or refer to Investigations in Stress Control by Allen & Hyde, Chapter 8: Social Engineering and Chapter 9: Time Management. Allow at least one week practice period for students after they have selected one of the stress reduction techniques appropriate to their needs, as indicated by an earlier self-assessment.

Students should have a familiarity with several stress reduction techniques in this area, but need to demonstrate mastery in only one.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

*** Controlling Stress and Tension
Part III of "HOW TO PREVENT AND REDUCE STRESS: INTERVENTION AND MANAGEMENT TECHNIQUES" pp. 124-234.

*** The Relaxation and Stress Reduction Workbook, Chapters 11, 12, 13
(See Appendix D for references)

*** Investigations in Stress Control, Chapter 8

PROCEDURES

Continue with an examination of the techniques of Affirmation, Refuting Irrational Ideas and Thought Stopping. See Chapter 10 in The Relaxation and Stress Reduction Workbook for details on Refuting Irrational Ideas and Chapter 9 for specifics on Thought Stopping.

Conclude your training and practice in this unit by combining the techniques: BREATHING, RELAXATION, BIOFEEDBACK AND EXERCISE.

Instruction in this unit should proceed in the following order. First, discuss and demonstrate proper breathing techniques with your class. Assure yourself that they all understand and can demonstrate diaphragmatic breathing. Your next step will be to teach relaxation methods. The technique of Autogenic Phrases combined with diaphragmatic breathing would be the best combination for preparation of the biofeedback training that will follow.

Exercise should be treated separately as the scope and variety of information on this subject is extensive.

Finally, have your students complete Student Analysis summary sheets and Stress Management Plans. This will act as a guide for them as they practice these new techniques and attempt to incorporate them in their daily lives throughout Unit IV and beyond.

RESOURCES

- + Teacher
- * Gifted Student
- ** "Learns by Doing" student
- *** All students

*** The Relaxation and Stress Reduction Workbook, Chapters 9 and 10.

*** Controlling Stress and Tension treats these subjects on pages 180-231. Investigations in Stress Control does an excellent job with Biofeedback on pages 163-186. It is suggested that the Biofeedback Training Log and Biofeedback Learning Curve Forms be utilized from this workbook by all students.

*** Home practice with a simple hand thermometer is essential to student mastery in this area.

*** Wellness Workbook, Chapter 5 and 8

*** Student Analysis and Lifestyle Planning Worksheets (see Appendix C)

Stress Management Plan Worksheet
(see Appendix C)

UNIT IV

Practicing Stress Reduction or I Did It My Way

UNIT IV: PRACTICING STRESS REDUCTION

or

I DID IT MY WAY

Overview of Instructional Strategies and Major Concepts

The fourth and final unit of this course is completely devoted to the students' individual "practice" of the stress management techniques they have chosen and included in their self-prescriptions. It is also a time to monitor their progress and give advice and counsel to those that may be experiencing difficulties of any kind, and encouragement and praise to those who seem to be demonstrating progress.

The goal here is to assist students in translating theory and technique into a way of life. Measures of success will be reflected in an improved set of scores on the post-assessments utilized to measure stress levels compared to those earlier (pre-) in the course. Utilization of the Taylor Manifest Anxiety Scale, The Physical Stress Symptoms Scale and the Rotter Scale are recommended. A pre-post comparison of stress levels as measured by these scales should be a good indicator of student progress. Utilize the forms provided to record pre-post test and self-assessment scores. (See Appendix C.)

57

PROCEDURES

DAY ONE

Based on students' selection of techniques to be practiced, form small study groups (not more than ten students per group). Organize the room to accommodate three Learning Labs; the first lab will provide a practice area and activities for students learning techniques to manage stress caused by the Environment. Techniques such as Time Management, Goal Alternative System, Nutritional Engineering and others can be practiced here.

The second Learning Lab should accommodate students working on stress management generated by PERSONALITY or mental stressors. Techniques such as Affirmation, Assertiveness Training, Thought stopping, Combatting Distorted Thinking and others can be practiced here.

Your third learning Lab will accommodate students practicing techniques to deal with physical stressors. The Relaxation, Breathing, Autogenic Phrases and Biofeedback activities can be mastered in this lab.

It is highly recommended that students work toward mastery in at least one stress reduction technique in each of the three labs. A posted schedule for each lab can be set up for student scheduling.

Finally, as a concluding activity it is recommended the students read and report on one or more of the special readings listed. Students can report on these readings in book reports or in class presentations.

Make sure to leave time in the last week of class for post self-assessments and final essay exam. This should allow the class to have first hand knowledge of their pre-post scores on the self-assessments so that they can evaluate their progress and thus respond to the essay exam questions with some objective evidence of improved functioning.

PUTTING YOURSELF IN CHARGE
(PRACTICES FOR A HEALTHIER YOU)

LECTURE #1

LECTURE TITLE: All the Wrong Answers

THEME: Stress is a factor in 50% to 80% of all disease. Maladaptive coping skills and lifestyles need to be discarded in favor of behaviors that promote one's health. The cost of distress can be seen in economic, social-emotional and behavioral problems. The principles for "Putting Yourself in Charge" of your own health include six basic concepts.

I. Introduction of Lecture:

Begin the lecture by utilizing the stories and information on pages 17-19 of Donald Lubeling, Kicking Your Stress Habits. Adapt stories to the local scene to make them more interesting for your students. Adaptations can include name changes, change of address and inclusion of teenage problems.

II. Cost of Stress:

Review the facts and figures on pages XII - XIV in the introduction of the Teacher Textbook, Human Stress, Its Nature and Control. Pay particular attention to the cost of stress in terms of illness and death, economics and maladaptive coping.

III. Major Concepts of the Course Are as Follows:

1. Stress may be the most serious, life-threatening disease facing each student.
2. The students cannot avoid stress in their lives, but they can learn to control it.
3. The mind and body are not independent, unrelated entities. They are constantly involved in a dynamic interaction.
4. To a large extent, the students have to be personally responsible for the state of their own health.
5. Managing stress in one's life is a matter of personal priority and effort.
6. Having assumed the responsibility for one's health, one can begin to direct the quality of life and experience the joy of true wellness.

PUTTING YOURSELF IN CHARGE
(PRACTICES FOR A HEALTHIER YOU)

LECTURE #2

LECTURE TITLE: Wellness Concept

THEME: Wellness is a choice - a decision you make to move toward optimal health. Wellness is a way of life - a lifestyle you design to achieve your highest potential for well-being. Wellness is the integration of body, mind and spirit - the appreciation that everything you do, and think, and feel, and believe has an impact on your state of health.

Wellness is about assuming charge of your own life, living with changes, and channeling life energy.

I. Introduction of Lecture:

Begin the lecture by utilizing the Wellness Workbook. Assign readings, or if there are not enough copies of the workbook, summarize chapter 1, pages 2-24.

II. The Wellness Index:

Have students complete the Wellness Index, pages 25-45, from the Wellness Workbook. Have students chart their Wellness Index Wheels.

III. Major Concepts of Wellness:

1. Self Responsibility - you are in charge of your own life.
2. Nutritional Awareness - eat nutrients high in fiber, low in sugar, fat and sodium.
3. Moving (physical fitness) - exercise is fun; get in touch with your body and nature.
4. Breathing - learn how to breathe properly.
5. Sensing - eliminate the abuse of our senses, appreciate them, and use them creatively.
6. Feeling - feelings mean emotions, such as anger, grief, joy and fear.
7. Thinking - thinking is related to physical and mental health, and molds reality.
8. Playing and Working - recreation (play) is to make new, to vitalize, to inspire with life and energy.
9. Communicating - exchange of information, including self-talk and assertiveness.
10. Sex - the integration of body, mind and spirit, not confined to genital organs or intercourse.
11. Meaning - process of adjusting to change; requires self-searching, looking inward and facing death.
12. Transcending - when the body-mind leaps beyond its ordinary limits; moments of supreme joy, of enlightenment.

STUDENT EXAMS AND ANSWER SHEETS

| 1. Research has demonstrated that noise can produce cardiovascular changes. | A | D |
| 2. The Glass and Singer studies found that living over a 12-lane expressway did not impair children's ability to learn to read. | A | D |
| 3. The Kryter (1970) studies found that human beings have capabilities which allow them to adapt to excessive noise stress. | A | D |
| 4. The National Institute for Occupational Health has gone on record stating that noise is capable of stimulating changes in essential physiologic functioning suggestive of a general stress reaction. | A | D |
| 5. Noise is not capable of causing distress. | A | D |
| 6. There is evidence that excessive noise can produce behavioral changes as well as physiological change. | A | D |

STUDENT HANDOUTS

Sources of stress in my life

Step 1

Make a list of the important sources of stress in your life.

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Step 2

Rank the items listed in order of importance to you.

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Step 3

Place the five highest ranked items into one or more of the following categories of stressors.

A. Physical

1. _____
2. _____
3. _____
4. _____

B. Environmental

1. _____
2. _____
3. _____
4. _____

C. Emotional

1. _____
2. _____
3. _____
4. _____

Analysis of sources of student stress

[illegible]

Directions:

1. Rank order the five most common sources in each category.
2. Report to class total number of stressors in each category.
3. Based on your analysis what is the major source of stress for this class?

1. Rank order the five most common sources in each category.
2. Report to class total number of stressors in each category.
3. Based on your analysis: what is the major source of stress for this class?

2. At what range does noise become annoying?
3. What is the pain threshold for most people with reference to noise level?
4. At what noise level do nervous and endocrinal responses begin?
5. What is the relationship between noise and food? Describe this relationship.
6. Do you know what the benefits of silence are? Discuss the effects silence has on your health.

STUDENT READING : STUDY GUIDE

TIME MANAGEMENT

Your ability to manage the resource of time can be a major stress management skill in your life. As such, mastery in this area will allow you to avoid the six symptoms of poor time management.

1. Rushing.
2. Chronic vacillation between unpleasant alternatives.
3. Fatigue or listlessness with many hours of non-productive activity.
4. Constantly missed deadlines.
5. Lack of time for rest or personal relationships.
6. The sense of being overwhelmed by demands and details, and having to do what you don't want to do most of the time.

In order for you to reduce or eliminate the above symptoms, you will need to follow the three basic rules of time management.

1. Establish priorities that highlight your most important goals.
2. Schedule realistically and eliminate low priority tasks.
3. Learn how to make basic decisions.

Roger Allen (Investigation in Stress Control), recommends you follow a four step procedure to implement a time management plan in your life.

1. List all the tasks that are to be accomplished in a given period of time. For example, on Sunday evening list all the things you need to get done during the upcoming week.
2. Establish priorities for the tasks and revise the list, listing tasks in order of importance. For example, if you have an important paper due on Friday, it may be listed as number one so you would start it at the first available time on Monday.
3. Allocate a reasonable amount of time to the tasks and then increase this amount of time by 15% to allow for interruptions and unplanned delays.
4. From your calendar, identify periods of time during the next week in which you can work on each task (The Daily Plan Sheet can be used for this.)

Directions

93

Complete the activity HOW I USE MY TIME for three days. On the fourth day total the three days. Next, use the Daily Plan Sheets provided for three days. Try using the model for three days during the week. After trying out the model, respond to the items on the Analysis report.

ANALYSIS REPORT IX: TIME MANAGEMENT

1. As a result of keeping a three-day record on how you spend your time, identify at least three things you discover about the use of your time that you were unaware of before.
2. Are there any things you propose to change in regards to how you presently use your time?
3. Do you feel that you could reduce your stress through more effective use of your time or are you presently managing your time effectively?
4. In what ways did the use of the time management model help you?
5. Make a list of your "Time-wasters:" the things you feel needlessly waste your time. Next, rank order them beginning with the greatest waste activity.
6. Which of these are you responsible for and what will you do about them?
7. Identify and list those created by sources other than you.
8. How can you gain control over some of the time-wasters created by other people or events?
9. What have you learned from this activity?

WORKSHEET #1

MY PERSONAL LIST OF STRESSFUL SITUATIONS

RANK

ITEM

RANK	STRESSFUL SITUATION

STATEMENT OF PREPARATION

CONFRONTING STATEMENTS

COPING WITH FEAR STATEMENTS

Reduction of Anxiety

REINFORCING SUCCESS STATEMENTS

STUDENT READING
STUDY GUIDE

STEP ONE: Construct a personal list of stressful situations, and arrange the list vertically from the least anxious to the most anxious situation. (Use worksheet #1.)

STEP TWO: Use your imagination and visualize each of these situations and learn to relax away any stress you feel. See yourself handling the stressful situation in a relaxed confident manner.

STEP THREE: Create an arsenal of stress-coping remarks for each situation. Use these remarks as you visualize each stressful scene until your stress-coping thoughts become automatic. (Use Worksheet #2)

Coping skills practice has been shown to be effective in the reduction of general anxiety and is useful in interview, speech and test anxiety.

#9 (from student text)

STEP 1 What is the desired behavior or goal?

NO

YES

→ STOP! Why are you doing this exercise?

STEP 3 What is the obstacle(s) that keep(s) you from obtaining this goal?

STEP 4 Can this obstacle be removed within a reasonable time period?

NO

YES

→ If any reasonable methods exist by which you may obtain your goal by removing the obstacle, do so.

(go to STEP 5)

STEP 5 Consider your desired goal. Take some time and make a list of specific rewards or desirable characteristics which make that goal desirable to you. Now go back and give each one of those desirable characteristics a score indicative of how important each one is to you. A score of 1 would be the lowest, 10 the highest. Do this very carefully; it is very important.

Rewards

Points

[illegible]

YES (List alternatives then try them out.)

108

108

NO If you have arrived at this point, it seems apparent that all of those desirable characteristics listed in STEP 5 are currently unobtainable. Therefore, instead of feeling sorry for yourself, make a list of alternatives which are possible and which have at least some of the same desirable characteristics as the original goal. Select the behavior that results in the highest point score possible. This alternative is your best one because it is most similar, based on the points assigned in STEP 5, to your original behavior.

Alternatives

Points

This image shows two pages of a notebook or ledger. Both pages are filled with horizontal blue ruling lines. The left page has approximately 20 lines, and the right page also has approximately 20 lines. There is no handwriting or other markings on either page.

STUDY GUIDE

Cognitive Skills

On pages 153-154 of your text you will find reference made to the technique of thought-stopping. Thought-stopping is just one of several cognitive (thinking) skills you can learn to fight the stress generated by the vicious cycle of obsessional thoughts. Other techniques include Combating Distorted Thinking, Refuting Irrational Ideas and Positive Visualization.

All four techniques have many things in common and your learning any one of them will, if mastered, go a long way in reducing your overall stress levels.

In combating distorted thinking for example, 15 styles of distortion have been identified. Chances are if you suffer from interpersonal or general anxiety, depression, chronic anger or compulsive perfectionism, you are a victim of one or more of these distorted thinking patterns.

A summary of the 15 styles of Distorted Thinking follows. (Source: Thoughts and Feelings by Davis, McKay and Fanning p. 26)

1. Filtering: You take the negative details and magnify them while filtering out all positive aspects of a situation.
Example: I could have enjoyed the picnic except the chicken was burnt.
2. Polarized Thinking: Things are black or white, good or bad. You have to be perfect or you're a failure. There is no middle ground.
Example: You're either for me or against me.
3. Overgeneralization: You come to a general conclusion based on a single incident or piece of evidence. If something bad happens once you expect it to happen over and over again.
Example: Ever since Lisa I've never trusted a redhead.
4. Mind Reading: Without their saying so, you know what people are feeling and why they act the way they do. In particular, you are able to define how people are feeling toward you.
Example: He's always smiling, but I know he doesn't like me.
5. Catastrophizing: You expect disaster. You notice or hear about a problem and start "what ifs: What if a tragedy strikes? What if it happens to you?

Example: We haven't seen each other for two days and I think the relationship is falling apart.

Cognitive Skills

6. Personalization: Thinking that everything people do or say is some kind of reaction to you. You also compare yourself to others, trying to determine who's smarter, better looking, etc.

Example: Quite a few people here seem smarter than I am.

7. Control Fallacies: If you feel externally controlled, you see yourself as helpless, a victim of fate. The fallacy of internal control has you responsible for the pain and happiness of everyone around you.

Example: You can't fight the system.

8. Fallacy of Fairness: You feel resentful because you think you know what's fair but other people won't agree with you.

Example: It isn't fair, that you go out and have fun while I'm stuck doing homework.

9. Blaming: You hold other people responsible for your pain, or take the other tactic and blame yourself for every problem or reversal.

Example: It's your fault we're always in the hole each month.

10. Shoulds: You have a list of ironclad rules about how you and other people should act. People who break the rules anger you and you feel guilty if you violate the rules.

Example: You should never ask people personal questions.

11. Emotional Reasoning: You believe that what you feel must be true automatically. If you feel stupid and boring, then you must be stupid and boring.

Example: I feel depressed, life must be pointless.

12. Fallacy of Change: You expect that other people will change to suit you if you just pressure or cajole them enough. You need to change people because your hopes for happiness seem to depend entirely on them.

Example: If you'd be more sexually open, we'd have a much happier marriage.

13. Global Labeling: You generalize one or two qualities into a negative global judgement.

Example: He was a loser from the first day he showed up here.

14. Being Right: You are continually on trial to prove that your opinions and actions are correct. Being wrong is unthinkable and you will go to any length to demonstrate your rightness.

Example: I don't care what you think, I'd do it exactly the same way again.

15. Heaven's Reward Fallacy: You expect all your sacrifice and self-denial to pay off, as if there were someone keeping score. You feel bitter when the reward doesn't come.

Example: I worked and raised these kids and look what thanks I get.

PRACTICE: Spend some time listening to yourself and others. What are your favorite or habitual styles of distorted thinking? Do they generate much stress in your life? How can you combat such distortions? Write examples of distortion on the lines below. Gather them from your own self-talk or from verbalizations of your family or friends.

TYPE OF DISTORTION

1. _____
Example: _____
2. _____
Example: _____
3. _____
Example: _____
4. _____

STRESS MANAGEMENT PLAN

FOR: _____
(Student's Name)

1. I have found my highest stress levels in the following areas. (Check those that apply based on test scores.)

Social or Environmental

Life Events
Frustration
Overload
Deprivation

Psychological

Self-Perception
Behavior Patterns
Anxious Reactivity

Physical

Nutrition
Noise
Exercise

2. Based on my own analysis, I choose to include in my lifestyle, practice in the following techniques.
(See Symptom Effectiveness Chart.)

Time Management

Assertiveness Training

Nutrition Improvements

Exercise Program

Breathing Exercises

Autogenic Training

Affirmations

Relaxation Training

Biofeedback Training

Refuting Irrational Ideas

Combating Distorted Thinking

Problem Solving

Visualization

Values Clarification

Other _____

3. I agree to complete the following self-assessments or Stress Audits at the end of the course to monitor and evaluate my own progress.

Wellness Index (Parts 1-12)
Stress Audit (Parts 1-6 & A-G)
Self-Assessments (1-9)
